Mean 7.378; Variance 4.645; scale 1.718 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Anticancer human monoclonal antibody variable region sequences - and
                                           Human anti-tumour antigen antibody light chain variable region cDNA. Human, tumour antigen, cancer, monoclonal, antibody, light chain; variable region; medicine; pharmacology; blochemistry; ds.
                                                                                                                                                                                                                                                                                                                               The present sequence encodes a human anti-tumour antigen monoclonal antibody (MAb) light chain variable region, useful in medicine, pharmacology and blochemistry. The isotype of a MAb socreted by the human/human hybridoma HT was determined to be much and kape. Human MAb was Furfiled, and the antigen reconsisted human MAb CLM*-19M identified by western blotting.

of the invention preferably contains the sequence represented by W13912 in the complementarity determining region-1 (CBR1) or the heavy chain variable region. The antibody of the invention also contains the sequence represented by W13913 in the CDR-3 of the light chain variable region. The antibody is capable of binding to adr type hepatitis B (HB) virus antigen. A human anti HH virus monoclonal antibody preparation which is highly safe and is effective to adr type HB virus can be provided, using the monoclonal antibody. It can also be used as a vaccine against HB infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-MAY-1997 (first entry)
Coding sequence for light chain #1.
Antibody, heavy chain; light chain; variable region; human; monoclonal; complementarity determining region, human; adr type hepatitis B virus, HB virus; CDR; virus antigen; anti-HB antibody; vaccine; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            124 goccetaagetectgatetatgetgeatecagtttgeaaaqtggggteceateaaggtte 183

T60116-T60123 represent the coding sequences for the heavy and light chains of the human monoclonal antibody of the invention. The antibody of the invention preferably contains the sequence represented by W13912 in the complementarity determining region-1 (CDP-1) of the heavy chain variable region. The antibody of the invention also contains the sequence represented by W13913 in the CDR-3 of the light chain variable region. The antibody wis capable of brinding to adr type hepatitis B (HB) virus antigen. A human anti-HB virus monoclonal antibody preparation provided, using the monoclonal antibody. It can be provided, using the monoclonal antibody. It can also be used as a vaccine against HB infection.
                                                                                                                                                                                                                                                                              Coding sequence for light chain #2. Antibode region: human: monoclonal: Antibody; heavy chain; light chain; variable region: human; adr type hepatitis B virus: complementarity determining region; human; adr type hepatitis B virus: HB virus; CDR; virus antigen; anti-HB antibody; vaccine; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5 AGCTCACCCAGTCTCCATCGTCCCTGTCTGCATTTGTNGGAGACAGACAGACACACCATCACTT 64
                                                                                                                                                                                                                                                            A DNA sequence (161240) codes for a polypeptide (W1638) comprising a leader Sequence (161240) codes for a polypeptide (W1638) comprising a leader Sequence. RF1 light chain variable region (see also W1634), and human kappa constant region. PF1 is a human monoclonal antibody (hMAb) specific for the fusion protein of respiratory syncytial virus (PSV). The DNA sequence, in vertor w1628pt. can be used to produce the light chain constructs (see also 1614-42, T61279) and light chain constructs (see also 1614-42, T61279) are similarly used. The transfected host cells provide a constant, or prevention of RSV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Mismatches 34; Indels (; Gaps

Nucleic acids (T61236-39) respectively code for the RF-1 VL domain, PR-2 VH domain, FR-2 VL domain and RF-1 VH domain (W11634-37) of human monoclonal antibodies (hMAbs) RF-1 and RF-2, which show high affinity for respiratory syncytial virus (RSV) fusion protein. The hMAbs were obto. by; antigen priming of naive human splenocytes in vitro; transferral of the primed splenocytes to a SCID mouse; boosting with antigen; isolating human antibody-producing B-cells from the SCID mice; and immortalisation of the B-cells using Epstein Barr virus. DNA encoding the RF-1 and RF-2 heavy and

                                                                                                                                                                Agent contg, antigen-binding domain of human antibody to transforming growth factor beta 1 or 2 - and nucleic acid encoding it, used to neutralise effects of TGF, e.g. for control of fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      myocardial infarction, post-ingloplasty restenosis, scleroderma, vascular disorders, cataract, glaucoma, or esp. neural scarring and glomerulonephritis, also (not claimed) osteoporosis), or (ii)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immune and inflammatory disease

Example 1: Fig 2b(i): 184pp: English.

Example 1: Fig 2b(i): 184pp: English.

Wisson Asquence comprises the gene encoding the VL domain
(Wisson) of human sorv antibody 2A.Hil (also known as 6H1), which
is specific for transforming growth factor (TGF) beta-2. It was
isolated from a light chain shuffle repertoire of a peripheral
blood lymphocyte library. The antigen-binding domains of human
antibodies (see Wisson 40) to TGF beta-1 and/or beta-2 can be used
to counter the adverse effects of TGF beta, such as (i) promotion
of fibrosis (in dermal, coular or keloid scarring, lung fibrosis,
arterial injury, proliferative retinopathy, retinal detachment,
adult respiratory distress syndrome, liver cirrhosis, post
                                                                                                                                                                                                                                                                                          188 gtggcggtggatctgggacagatttcactctcaccatcaacagtctgcaacctgaagatt

Nucleic acids encoding human antibody WH and VL can be used for produ. Of recombinant antigen-binding domains. Those are highly specific, have low dissociation constants (pref. less than 5 nM).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-TGE beta-2 scFv antipy)
Anti-TGE beta-2 scFv antibody 6-H1 VL gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immune and inflammatory disease
Example 1; Fig la(iii); 184pp. English.

This DNA sequence comprises the gene encoding the VL domain
(W1539) of human scFv antibody 3169, which is specific for
transforming growth factor (IGF) beta 1. Antienn-binding domains
of human antibodies (see W15522-40) to TGF beta-1 and/or beta-2 can
be used to counter the adverse effects of TGF beta, such as (i)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               post mycoardial infarction, post-angioplasty rectenosis, scleroderma, vascular disorders, cataract, glaucoma, or esp. neural scarring and glomerulonephritis, also (not claimed) esteperosis), or (ii) immune and inflammatory diseases (e.g. rheumatoid arthritis, macrophage deficiency diseases or macrophage pathoge.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                infection). Nucleic acids encoding human antibody VH and VI can be used for prodn of recombinant antigen-binding domains. These are highly specific, have low dissociation constants (pref. less than 5 nM) and low ISSo for neutralisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  promotion of fibrosis (in dermal, ocular or keloid scarring, lunfibrosis, arterial injury, proliferative retinopathy, retinal detachment, adult respiratory distress syndrome, liver cirrhosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the invention preferably contains the sequence represented by Wilsolz in the complementarity determining region-1 (CDR-1) of the heavy chain variable region. The antibody of the invention also contains the region. The antibody wilsold in the CDR-3 of the light chain variable region. The antibody is capable of binding to adr type hepatitis B (HB) virus antigen. A human anti-HB virus monoclonal antibody preparation which is highly safe and is effective to adr type HB virus can be provided, using the monoclonal antibody. It can also be used as a vaccine against HB infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 10; Page 17; 20pp, Japanese.
160116-T60123 represent the coding sequences for the heavy and light
chains of the human monoclonal antibody of the invention. The antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Coding sequence for light chain #4.

Antibody, heavy chain, light chain, variable region; human, monoclonal, complementarity determining region, human, adr type hepatitis B virus, HB virus, CDR, virus antigen, anti-HB antibody; vaccine; ss. Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            184 attggcagtggatctgggacagatttcactctcaccatcacttctctgcaacctgaagat 243

Tibili Trough are represent the coding sequences for the heavy and light chains of the human monoclonal antihody of the invention. The antibody of the invention preferably contains the sequence represented by Wilseld in the complementarity determining region. The triping region. The antibody of the invention also contains the sequence represented by Wilseld in the CDP-3 of the light chain variable region. The antibody of scapable of binding to addrugue hepatitis B (HB) virus antipen. A human anti-HB virus monoclonal antibody preparation which is highly safe and is effective to adrugue HB virus can be provided, using the monoclonal antibody. It can also be used as a sequence against HB infection. 89 C, 79 G, 82 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antibody; heavy chain; light chain; variable region; human; monoclonal; complementarity determining region; human; adr type hepatitis B virus; HB virus; CDR; virus antigen; anti-HR antibody; varcine: ss.

Claim 4: Page 12: 18pp Japanese.
T19912 Impresent the immunoalobulin heavy and light chain variable regions isolated from peripheral blowd lymphoryte strains These sequences were isolated from the B687 and 101-2 strains of peripheral blood lymphocytes of a Basedow's disease patient. These sequences are replaced, deleted or inserted into an antibody, to create the antibodies of the invention. The antibodies of the invention antibody and act by combining with thyrotropin receptor. The antibody can be used in a method to detect autoantibodies which have thyroid function stimulating activity.
Sequence 365 RP: 90 A: 101 C: 85 G; 90 T;

Example B, Column 21.24, 15pp, English
This is the nucleotide sequence encoding the light chain variable (VI)
region from the human mencelonal antibody (MAD) 2M1-2. The MAD was
generated by immunishing humans with a hepatitis B virus (HHV) vaccine,
isolating peripheral blood lymphocytes (PBL) and fusing them with a
mouse/human xenogencic cell line Shard for and fusing them pell.; 2M1-1, 2M1-2, M33-4 and L03-3. The cell lines were included

L- and H-chain DNA was amplified by PCP from Graves' orbital tissue and clones encoding autoimmune-associated immunoglobulin fragments were obtained. 14/15 clease of Lohain (Apppa) regions showed homology to the putative VK germline gene KL012 (given in PG9312). The DNA (26318-13) and colrect mino ucid (RT0359-64) sequences of 6 clones (OPPR.3, 16, 11, 9, 19 and 17) are provided. Sequence 285 BP: 75 A:

for production of an anti-hepatitis B virus surface antigen antibody by ELISA. The MADS are then purified from large scale cell culture by protein A chromatography, size separation on Sephacryl 3300 gel and ion exchange chromatography on O.Sepharose. The heavy and light chains of the MADS were isolated and their amino acid sequences determined. Primers were generated and used to amplify cDNA synchesised from RNA purified from each hybridoma cell line. The sequences of the heavy and light chains (nucleic acid and amino acid) from MADS PEI-1, ZMI-2, and MO3-4 are shown in T85838-45 and M24984-91. The MADS can be used to treat HBV infections in immunosupressed patients or patients with chronic active hepatitis, especially liver transplant patients.

polylinker: lst strand cDNA was prepared from pooled bulk
breast tumor tissue, and was then primed with a Not I -
olgo dff) primer. Double-stranded cNNA was ligated to Eco
PI adaptors (Pharmacia), digested with Not I and cloned
into the Not I and Eco RI sites of the modified privateror. Library is not normalized. (The normalized version
of this library is NCI_CGAP_Br2.) Library was constructed
by Rento Soares and M. Fatima Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed.

Mean 9.909; Variance 4 326; scole 2 291

Statistics:

and is derived by analysis of the total score distribution.
